1   Code

1.1   Python

Listing 1: Python code to create an incidence matrix

```python
import numpy as np
def incmatrix(genl1,genl2):
    m = len(genl1)
    n = len(genl2)
    M = None #to become the incidence matrix
    VT = np.zeros((n*m,1), int)  #dummy variable
    x = 0
    #compute the bitwise xor matrix
    M1 = bitxormatrix(genl1)
    M2 = np.triu(bitxormatrix(genl2),1)

    for i in range(m-1):
        for j in range(i+1, m):
            [r,c] = np.where(M2 == M1[i,j])
            for k in range(len(r)):
                VT[(i)*n + r[k]] = 1;
                VT[(i)*n + c[k]] = 1;
                VT[(j)*n + r[k]] = 1;
                VT[(j)*n + c[k]] = 1;

                if M is None:
                    M = np.copy(VT)
                else:
                    M = np.concatenate((M, VT), 1)

                VT = np.zeros((n*m,1), int)

    return M
```

1.2   Matlab

Listing 2: MATLAB Code that tests Solar System Function

```matlab
function test_advanced_level(unit_under_test)
    % TEST_ADVANCED_LEVEL Test the simulator against the advanced level of
    achievement.
    %
    % TEST_ADVANCED_LEVEL(@unit) tests a function called "unit" instead of the
    % default, "solarsystem".
    %
    % This is provided as a means for your to test your program's accuracy. We
    % supply here high precision answers that can use as a benchmark against
    % which to compare your code.
    %
    % A program similar to this one will be used during marking to test your
    % program's accuracy and speed. We'll use different initial conditions, so
    % don't try simply hard-coding these answers! :)
    %

    % Default to a function named "solarsystem"
    if nargin < 1
        unit_under_test = @solarsystem;
    end

    % Data
    % Data source: NASA JPL Development Emphemeris DE405, imported into Matlab
    % using https://au.mathworks.com/matlabcentral/fileexchange/46074-jpl-
    ephemeris-manager
